

## AIR SAW

### CORE CUTTING SERVICE

The Foothills Resource Services cutting machine isn't simply another saw in a box. It is specifically designed to maximize efficiency, with the layout in mind to minimize handling of the core.

### SUPERIOR DESIGN

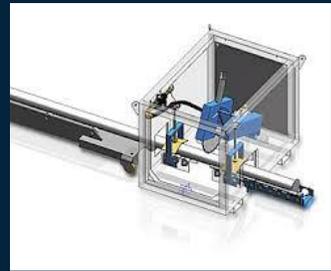

Built with stainless steel to be used in the most extreme of environments. It is equipped with a high torque 10 Hp motor and chain drive to eliminate down time associated with belt slippage and insufficient power. Automatic feeder for lubricant ensures maximum blade life in an error free configuration.

### SELF CONTAINED

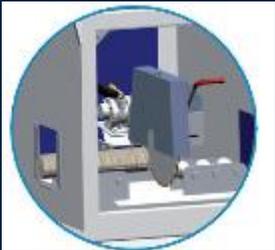

The Saw can be contained in a steel box to enhance the safety of the work environment. Roller guides in the box line up with those of the Lay Down Cradle to make gliding the core in effortless and minimize required processing technicians.

### VIBRATION DAMPENED

The design incorporates anti vibration features to reduce mechanical damage to the core by vibration of the motor all while eliminating the downfalls of other core cutting machines on the market.

Can be fully boxed in where required for safety.

The Saw Box aligns with the Foothills Lay Down Cradle to minimize core handling during processing
