

CORE SAWS

CORE CUTTING SERVICE

In Addition to our Air Saw, Foothills resource Services offers options for every task.

Abrasive Saw blades can be used in areas where the diamond is too aggressive. Idea for Fiberglass or Plastic sleeved cores.

Circular saws all feature highest quality diamond saw blades with maximum life.

MULTI SAW

The Foothills Multi Saw is a rigsite powerhouse. Able to cut cores into 1M lengths and slab them directly on location. The saw, table and recirculating fluid system are combined into a single easy to transport unit. The saw is run from standard 240V power supply

BAND SAWS

Foothills also offers a handheld, battery powered band saw where speed is required but the aggressive nature of the high powered circular cutting machines can harm the core in unconsolidated formations.
